

Speech Language Pathology Care

Our speech-language pathology services are delivered to address the specific needs of the patient in the areas of speech production, language comprehension, language expression, cognition and swallowing.

Speech therapy may benefit in improving communication, cognition and swallowing issues secondary to:

- Stroke
- Head/neck cancer
- Multiple Sclerosis
- Parkinson's disease
- Traumatic brain injury
- Alzheimer's disease and other conditions associated with dementia
- Respiratory conditions including pneumonia and COPD

By:

- Increasing muscle strength, ROM and coordination needed for speaking and swallowing
- Providing strategies to compensate for swallowing difficulties
- Re-training verbal, written and gestural expression
- Targeting memory, sequencing, categorization and problem solving
- Enhancing abilities to comprehend spoken and written input
- Examining the impact of the environment on communication, cognition and swallowing

Virtual reality allows for better evaluation, intervention and monitoring

We offer:

- Complex medical care
- Intensive rehabilitation
- Skilled nursing
