

Assessment

Assessing a patient's ability prior to and throughout their therapy treatment is critical in goal planning and tracking progress.

Comprehensive assessment of the patient identifies underlying problems and functional impairment. Your therapy team will develop a customized regime based on your history, goals, tolerance and preferences in improving:

- Fall management
- Gait issues
- Issues related to stroke
- Recovery from joint replacement and other orthopedic conditions
- Muscle weakness
- Poor balance or coordination
- Difficulty walking or sitting upright
- Loss of flexibility or movement
- Cognition, perception and sensory abilities
- Cardiovascular and respiratory status
- Communication, speech and language skills

We offer:

- Complex medical care
- Intensive rehabilitation
- Skilled nursing
