

# Shortwave Diathermy

This system uses a gentle, deep heat to increase blood flow and tissue extensibility, while reducing pain and inflammation. This option is used when a larger or deeper treatment area is needed. This device can also be used in a non-heat method to create a therapeutic effect on biologic tissues.

## Shortwave diathermy may benefit in the treatment of:

- Soft tissue injuries
- Slow healing wounds
- Arthritis, joint pain and stiffness
- Scar tissue
- Contractures

## By:

- Helping manage pain
- Increasing local circulation to assist with healing
- Treating larger areas such as knees, hips or back
- Increasing movement and flexibility in stiff muscles and joints

## We offer:

- Complex medical care
- Intensive rehabilitation
- Skilled nursing
